

What is a Green Star?

Developed in 2003 and driven by the Green Building Council of Australia (GBCA), Green Star is Australia's only national, voluntary and truly holistic rating system for sustainable interiors, buildings and communities. Green Star ratings are independently verified and internationally recognised.

Undertaking Green Star certification demonstrates leadership, innovation, environmental care, and social responsibility.

Green Star has a performance rating solution for the following categories:

- Buildings & Design as Built
- Interiors
- Communities
- Performance

Each project is examined across multiple criteria, using a rating scale to measure and reward projects that achieve best practice or above in their sustainability outcomes.

Lower operating
costs and
higher return on
investment

Enhanced
marketability
of your green
portfolio

Creating
healthier places
to live and work

Choosing a Green Star Certifier

Credwell boasts experienced and dedicated Green Star certification specialists. They proudly advocate for excellence and innovation in the built environment and the broader community.

Our team of Green Star Accredited Professionals understand the practical implications of all the certification criteria and have the advantage of interdisciplinary teams to ensure the criteria are seamlessly cross referenced with regulatory requirements.

What places Credwell as the number one choice for achieving your project's Green Star rating is our capacity to work hand-in-glove with every sustainability and regulatory requirement your project will encounter, at all stages of its lifecycle.

Minimum DTS Requirements
